

THE ART OF FIRE PROTECTION

No job is too small for individual attention or too big for our resources.

In the early 1900s, fire protection was more of an art than a science. With ingenuity and a little elbow grease, Herbert S. Hiller became an expert in the “state of the art.” In 1919, he founded a small company that would grow to become a trusted worldwide leader in fire and life safety.

The original Hiller operation began as a modest venture in New Orleans, Louisiana. The primary service was to design and provide fire protection equipment for commercial and shipyard customers.

A century later, the same ingenuity that Mr. Hiller brought to the fire protection industry is now being championed by the experienced team at Hiller. Headquartered in Mobile, Alabama, Hiller extends its reach globally as well as in domestic markets with offices across the United States.

Science has progressed, but the art of fire protection requires refined skill and persistence. Hiller has combined

sound mechanical and electrical engineering practices, decades of experience, and the latest in fire protection to create products and services of the highest level of excellence. Our services include life safety protection through the design, installation, monitoring and service of fire extinguishers, fire sprinkler systems, fire suppression systems, fire alarm systems, security systems and more.

All around the world, Hiller products and installations are protecting lives and property. We are proud to safeguard everything from small businesses to nuclear testing facilities, yachts to aircraft carriers, and gas stations to offshore platforms.

Contact your closest Hiller branch to find out what we can do for you!
