Fire Alarm System Testing and Inspection Meeting NFPA 72 Requirements

Our highly trained technicians provide complete inspection, testing and maintenance services for your fire alarm systems as required by NFPA 72, National Fire Alarm and Signaling Code. Key testing and inspection elements include:

- ▶ Annual inspection and testing of all initiation devices, including smoke detectors, heat detectors, manual pull stations, water flow switches and tamper switches to validate proper operation.
- ▶ Annual testing of all notification appliances, including horns, strobes, chimes and speakers. Checks for proper function, synchronization and audibility.
- ▶ Annual function test of the fire alarm control panel, standby battery and trouble signals to confirm proper operation.
- ▶ Semi-annual inspection and testing of emergency communication systems, including speakers and paging microphones.
- ▶ Monthly and annual testing of all monitoring connections to central stations or remote supervising stations.
- ▶ Testing and inspection of two-way radio communication enhancement systems.

We document all testing and can assist with repairing, upgrading or replacing components that fail inspection. Our technicians are NICET-certified in fire alarm system installation and maintenance. We stay current on all NFPA 72 testing requirements and have years of experience servicing fire alarm systems from all major manufacturers. Contact us today to schedule your expert NFPA 72 Fire Alarm System Testing and Inspection at hillerfire.com/request-service.
